- Project Title: Event Discussion platform
- Course: ReactJS
- Student Name & Roll No: Poornachandrika.s & 24BIT135
- Department: B.Sc IT
- Mentor / Guide: Mr.Aravind [Project Guide]

*A full-stack web app to explore events, book tickets, and join discussions.

*Supports real-time interaction with comments, replies, likes, and tagging.

*Build with MongoDB, Express.js, React.js, Node.js (MERN).

*Unlike normal apps, it allows community engagement through discussions.

Introduction

*Build a full-stack event management system using MERN.

*Implement user authentication and role-based access (Admin/User).

*Enable real-time discussions with comments and replies.

*Create an event booking system.

*Design a responsive and user-friendly interface.

Objectives

*Most event platforms allow only viewing or booking events.

*Users cannot interact, discuss, or share opinions.

*Need: A platform to discuss events, ask questions, and give feedback.

*Solution: Event + Discussion system combined.

Problem Statement

*Frontend: React.js, CSS

*Backend: Node.js, Express.js

*Database: MongoDB

*Libraries & Tools: Axios, React Router, Mongoose

*IDE/ Browser: VS Code, Chrome

Tools & Technologies Used

*User/Admin logs in

*Admin manages events

*User views and books events

*User enters discussion page

*Users add comments, replies, likes, and tags

*Data stored in MongoDB and displayed dynamically

System Design

*Authentication: Login and role-based access

*Event Module: Admin can add/update/delete events

*Booking Module: Users book events (name, email, phone)

*Discussion Module: Comments, replies, likes, tagging

*Notification Module: Alerts users on tags or replies

Module Description

User logs in → Events fetched → User selects event → Booking saved → Comments stored in parent-child relation → Replies displayed in tree structure → Likes updated dynamically

Core Logic & Algorithm

*CRUD for events (Admin)

*Booking system with user input

*Nested comments & replies

*Like and tagging functionality

*Navigation with React Router

*Data handling with Axios

Implementation

*Login Page

*Admin Dashboard (Add/*Update/Delete events)

*User Event Page

*Event Discussion Page

*Booking Page

*Admin Booking View

Output Screens

*MERN app implemented successfully

*Modules tested: Event creation, Booking, Comments & replies, Navigation

*Challenges: Routing, data passing, nested comments, booking data fixes

Results & Testing

*Combines event management + discussion system
*Demonstrates real-world MERN usage

Future Scope:

*Real-time notifications
*User profile & booking history
*Event images
*Live deployment

Conclusion & Future Scope
